

## Certified Holistic Cancer Practitioner (CHCP)

This course is designed to be unlike any other course available. As practitioners, we are seeing an overwhelming wave of cancer cases coming into our clinics. Every single one of us either knows a friend or a relative affected by cancer or has their own personal experience with it. While many courses do a thorough job of teaching the theory and allopathic aspects of cancer and some alternative and natural approaches, they do not leave the practitioner feeling confident with the day-to-day practical aspects of being able to manage their cases from the initial crisis and treatment options, through to palliation and hopefully full recovery. With all of the information available to us through the internet, print and media, sorting our way through the maze of alternative therapies can be daunting. There is simply not enough education and understanding about the alternative therapies available and the evidence of their reliability.

This CHCP course is a comprehensive, hands-on and practical training with plenty of in-class interaction, real-life cases, exercises and assignments that will leave the participant with a wealth of resources they will be able to take away and begin using right away. Alisa and Lynne will present many combined years of trainings and experience in clinical practice. This course will allow you to not only feel proud and confident in achieving the designation of CHCP, but to also be enabled to work with any cancer patient.

### Instructors:

**Alisa Herriman RNCP ROHP, Cancer Practitioner**, has been in the nutrition industry for 9 years. Alisa is a past graduate of Edison, and has since established a successful consulting practice. After spending the last 4 years specializing in Cancer with several courses under her belt, Alisa teaches the Inter-professional Cancer Program for Georgian College for health care professionals and is a facilitator for Edison's Certified Cancer Practitioner Program. Alisa brings a wealth of experience from her private consulting practice and her educational background. Since taking special interest to help those diagnosed with cancer Alisa has a thriving nutritional practice working with those who have cancer or a history of it. The teachings Alisa offers to this program will help any wellness practitioner, understand how cancer grows and develops, and how to use complimentary therapies within your practice.

**Lynne Hinton, BSc, BEd, RNT/ROHP** is Co-Owner of Health House nutritional consulting in Markham, ON. Health House provides nutrition seminars and information events for clients, groups and practitioners including the Nutritional Preceptorship Program ([www.nppwebinars.com/npp](http://www.nppwebinars.com/npp)). Lynne is also Co-Owner and Director of Education at **Edison Institute of Nutrition**. The Edison Institute is known for its comprehensive educational material available internationally, including two texts authored by Lynne, *Nutritional Symptomatology* and *Advanced Nutrition Practice*. Edison Institute is proud to be "Training Nutritional Professionals Worldwide". Lynne also offers an in-depth training in **Darkfield Microscopy**. Her focus is on educating and empowering her clients to take more responsibility for their own preventative health care. As a lecturer and mentor, Lynne brings a very "hands on" practical approach to nutrition education.

## Certified Holistic Cancer Practitioner (CHCP)

### Cancer Education and Management

This course discusses the possible causes of cancer and its links to diet, lifestyle and environment, with an in depth look at current medical treatments, natural treatments and preventative strategies. This very extensive training will provide the practitioner with every resource available to make a difference and to empower those with cancer.

#### Course description:

Teaches what cancer is and its possible causes.

- How diet and lifestyle can both cause and prevent cancer.
- Covers types of cancer and current medical treatments for each one.
- Teaches natural interventions for those with cancer, including dietary, nutritional, lifestyle and mental/emotional strategies and other alternative therapies.

#### Course Objectives:

This course will enable students to:

- Understand what cancer is and its possible causes.
- Understand which dietary and lifestyle strategies increase a person's risk for cancer development.
- Develop and implement cancer preventative strategies.
- Understand common medical protocols for a person diagnosed with cancer.
- Develop and implement a specific dietary and lifestyle strategy for a person living with cancer.
- Work with those who have cancer in the health care role.
